

WOODTEC

How to order your Radiator Cabinets

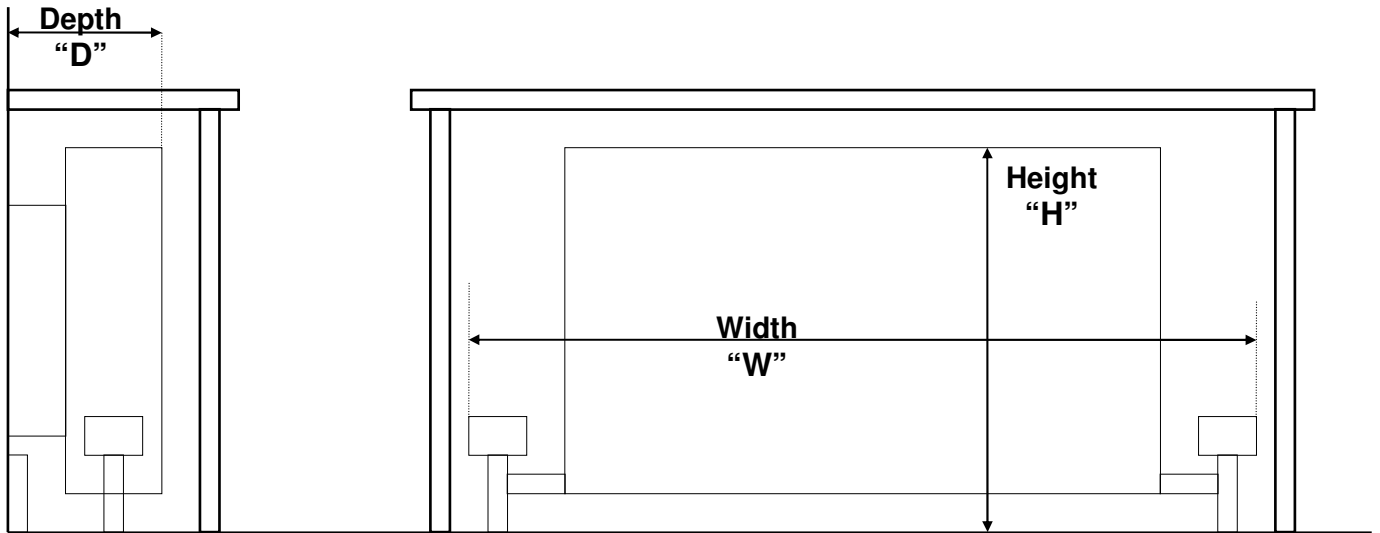

Measure radiator width to the outside of the valves and add 50mm to give internal cabinet width " W" .

(Please be aware of doors, power points, etc. as finished external width will be approx. 70mm wider than this).

Measure radiator height from floor to top of radiator and add 50mm to give internal cabinet height " H" .

(Please be aware of space under windows as finished height including top shelf is approx. 18mm higher than this).

Measure depth from the wall to front of radiator and add at least 25mm to give internal cabinet depth " D" .

| Cabinets ordered | "W" | "H" | "D" | Skirting cut out size | Decorative Panel chosen |
|------------------|-----|-----|-----|-----------------------|-------------------------|
